Profile

Computer Science undergraduate skilled in Java, Spring Boot, Spring Security, JWT, PostgreSQL, and Data Structures & Algorithms. Developed backend applications featuring secure authentication, RESTful APIs, database integration, and layered architecture. Strong understanding of object-oriented programming, relational databases, and modern backend development practices.

Technical Skills

Languages: Java, SQL, C++

Frameworks: Spring, Spring Boot, JPA, Rest API's

Platforms: AWS, Google Cloud, Microsoft Azure, PostgreSQL

Tools: GitHub, Git, Docker, IntelliJ IDEA, VS Code, Xcode, Maven, GitHub Actions, Jenkins, AWS

Projects

Hospital-management-system

May 2026

Developed a comprehensive Hospital Management System backend using Java, Spring Boot, Spring Security, Spring Data JPA, and PostgreSQL. The application provides RESTful APIs for managing patients, doctors, appointments, departments, and insurance records. Implemented JWT-based authentication and authorization to secure protected endpoints and ensure role-based access control. Designed a layered architecture following Controller-Service-Repository pattern for better maintainability and scalability. Integrated DTOs for request and response handling, global exception handling for robust error management, and JPA entity relationships for efficient database operations. The project demonstrates backend development best practices, secure API design, and database-driven application development.

Student-management-system

Mar 2026

Developed a Student Management System backend application using Java, Spring Boot, Spring Data JPA, and PostgreSQL. Implemented RESTful APIs to perform student registration, retrieval, update, and deletion operations. Designed a structured layered architecture using Controller, Service, and Repository layers to ensure clean code organization. Utilized DTOs for data transfer, validation for input handling, and exception handling mechanisms for improved reliability. Integrated PostgreSQL as the database and leveraged Spring Data JPA for efficient data persistence and query management.

Achievements

- **LeetCode (PRAS9829)::** Solved 150+ problems across Arrays, Strings, Linked Lists, Trees, Recursion, Sorting, and Dynamic Programming — demonstrating consistent algorithmic problem-solving ability and strong command of core CS fundamentals; Graphs in progress.
- **SQL (Intermediate):** SQL (Intermediate) — HackerRank: Joins, subqueries, aggregation, window functions, and data analysis. (Jan 2026)
- **Java Programming:** GeeksforGeeks: OOP, data structures, collections, and problem-solving patterns.
- **GitHub (Prashanttp)::** 20+ contributions across personal and academic projects; actively maintaining repositories.

Certifications

- **CS50: Introduction to Computer Science:** Completed Harvard University's CS50: Introduction to Computer Science course, covering programming fundamentals, algorithms, data structures, memory management, databases, web development, and problem-solving techniques. Developed a strong foundation in computer science concepts and computational thinking through hands-on programming assignments and projects.

Education

Sharda University

B.tech (CGPA: 7)

Aug 2023 – Present

Greater Noida, India
